

Language Science Press Translation and Multilingual Natural Language Processing

The book series centres around human and machine translation, with a special emphasis on empirical studies. This includes computational, corpus linguistic and cognitive aspects of translation. By its nature, the topic of translation is interdisciplinary. In an effort to narrow the gap between disciplines, the series is not limited to translation studies, but is also interested in related fields such as computational linguistics, language technology, psycholinguistics, neurolinguistics, cognitive science and corpus linguistics – provided that there is a link to human, computer-assisted, or machine translation, or to any type of multilingual natural language processing.

Possible Topics

- › machine translation (statistical, rule-based, example-based and hybrid), machine aided translation and interpreting translation technology
- › use of corpora in translation
- › annotation, alignment and searchability of translation data
- › cognitive aspects of translation
- › modelling the translation process
- › multi-modal and audiovisual translation

Editorial Board

- › Reinhard Rapp (Chief Editor, Aix-Marseille Université)
- › Silvia Hansen-Schirra (Johannes Gutenberg-Universität Mainz)
- › Oliver Čulo (Johannes Gutenberg-Universität Mainz)

Support us!

- › submit your manuscript
- › become a community proofreader
- › become a community typesetter
- › become a public supporter
