Language Science Press
Open Access Monographs

About

- › Language Science Press is a scholar-owned press
- › High quality, peer-reviewed open-access books in linguistics
- › Currently 14 series with editorial board members from all over the world
- › Published under a Creative Commons licence
- › Free for both authors and readers
- › Supported by the DFG with 500k€ during the startup phase
- › All books appear in a book series, and the series editors are responsible for acquiring, reviewing and selecting manuscripts for publication
- › Online workflow based on the publication management system Open Monograph Press
- › Pdfs are available free of charge from our website.
- › Printed copies can be ordered from our print-on-demand partners

Philosophy

For some time now, all scholars have been accustomed to sharing their materials at no cost with their colleagues, often with the help of services like Academia.edu and ResearchGate. Scientific publication thus no longer serves the need of disseminating research results – its purpose is to make the best work prominent enough to help build careers and to guide scholars in choosing what to read. This task of selecting the best work is carried out by the series editors of Language Science Press.

Our philosophy is that book publishing can be fully under the control of scholars because most of the traditional tasks of commercial publishers can be done more efficiently by scholars.

As of February 2015, more than 60 scholars have proposed manuscripts to Language Science Press. For the latest publications, see our website www.langsci-press.org.

Series

African Language Grammars and Dictionaries

Adams Bodomo, Ken Hiraiwa, Firmin Ahoua

Computational Models of Language Evolution

Luc Steel, Remi van Trijp

Conceptual Foundations of Language Science

Mark Dingemanse, Nick Enfield

Contemporary African Linguistics

Lee Bickmore, Akinbiyi Akinlabi

Empirically Oriented Theoretical Morphology and Syntax

Stefan Müller, Berthold Crysmann, Laura Kallmeyer

Implemented Grammars

Stefan Müller, Berthold Crysmann, Laura Kallmeyer

Language Variation

John Nerbonne, Dirk Geeraerts

Monographs on Comparative Niger-Congo

Valentin Vydrin, Larry Hyman, Konstantin Pozdniakov, Guillaume Segerer, John Watters

Studies in Caribbean Languages

John R. Rickford, Joseph Farquharson

Studies in Diversity Linguistics

Martin Haspelmath, Fernando Zúñiga, Peter Arkadiev, Ruth Singer, Pilar Valenzuela

Studies in Laboratory Phonology

Martine Vrice, Doris Mücke, Taehong Cho

Textbooks in Language Sciences

Stefan Müller, Martin Haspelmath, Claude Hagège, Marianne Mithun, Anatol Stefanowitsch, Foong Ha Yap

Topics at the Grammar-Discourse Interface

Philippa Cook, Anke Holler, Cathrine Fabricius-Hansen

Translation and Multilingual Natural Language Processing

Reinhard Rapp, Silvia Hansen-Schirra, Oliver Čulo

Language Science Press African Language Grammars and Dictionaries

African Languages are still among some of the least documented languages in the world. One of the aims of this series is to contribute to rectifying this state of affairs by focusing on the description, analysis, and documentation of languages within the African continent and contact languages within the African Diaspora. A distinctive aspect of this series is that each contribution is either (i) a comprehensive grammar, along with a (bilingual) lexicon as an appendix or (ii) a comprehensive monolingual or bilingual dictionary along with a sketch of the grammar of the language in question as an appendix.

Further scope

Different linguists of different specializations and interests, whether they are descriptive, theoretical linguists or lexicographers, are given the opportunity to make substantial contributions from their particular area of specialization towards documenting, preserving, and revitalizing African languages. As a second aim, even for African languages that are already quite well documented, our editors will recruit scholars well versed in contemporary linguistic theories and descriptive techniques to write newer and updated grammars of these African languages that have existing grammars, dictionaries and other resources.

Editorial Board

- › Adams Bodomo (Chief Editor, University of Vienna)
- › Ken Hiraiwa (Meiji Gakuin University, Japan)
- › Firmin Ahoua (University of Abidjan, Cote d'Ivoire)

Language Science Press

Contemporary African Linguistics

The aim of this series is to advance and sustain research on African languages. It will publish at least one annual volume, namely, selected papers from the Annual Conference on African Linguistics (ACAL), beginning with the 45th conference, held in 2014. ACAL has been held every year since 1970 and represents the largest annual gathering of Africa-oriented linguists in the world. The conference provides a forum for the presentation of current research on African languages by scholars from North America, Europe, Africa, and elsewhere. A subset of the presented papers, selected through a strict peer-review process, provides a sampling of research in the field by top current researchers. The series will also publish peer-reviewed compilations and monographs featuring research on other topics in African linguistics.

Language Science Press Conceptual Foundations of Language Science

No scientific work proceeds without conceptual foundations. In language science, our concepts about language underlie our thinking and organize our work. They determine our assumptions, direct our attention, and guide our hypotheses and our reasoning. Only with clarity about conceptual foundations can we pose coherent research questions, design critical experiments, and collect crucial data. This series publishes short and accessible books that explore well-defined topics in the conceptual foundations of language science. The series provides a venue for conceptual arguments and explorations that do not require the traditional book-length treatment, yet that demand more space than a typical journal article allows.

Submissions

We welcome original submissions, as well as expanded versions of previously published full-length articles or chapters that fit the series theme. Topics may cover any conceptual or theoretical issue of importance for research on language. To be considered for this series, a book must be short (length around 35,000 words, or 90 pages) and must be written in clear, accessible prose, to maximize its appeal across the fields of language science. Queries should be sent to the series editors.

Language Science Press Computational Models of Language Evolution

This series publishes high quality research using computational methods to investigate fundamental questions in the origins and evolution of language, informed by observations from historical linguistics and/or child language development. The series will include new monographs, revised doctoral dissertations, edited volumes, and textbooks. In order to be included in the series, the questions raised must be of relevance to evolutionary linguistics. There must be evidence of a working implementation that ideally can be accessed openly and, if empirical issues are considered, the data must ideally be available to compare them with the proposed models. The text must be of high quality and contain appropriate reference to prior work and the state of the art in the field.

Language Science Press Empirically Oriented Theoretical Morphology and Syntax

This series aims to publish high quality books that contribute to a better understanding of phenomena in morphology, syntax and the interplay between both. Since the recent history in linguistics showed that basic assumptions may change rather quickly, the ideal submission to this series is one that separates data discussion resulting in pre-theoretic generalizations and analysis. Such a separation ensures that published books will have some value even if the linguistic framework is radically changed. The separation of the description of the phenomenon from the analysis ensures that readers that are non-experts in more formal frameworks will find the books useful.

Such a separation ensures that published books will have some value even if the linguistic framework is radically changed. The separation of the description of the phenomenon from the analysis ensures that readers that are non-experts in more formal frameworks will find the books useful.

Requirements

The data discussion should be theoretically informed: Positive and negative examples appearing in the literature on the phenomena discussed should be included in the discussion, regardless of the specific framework used in the publication. Controversial examples ideally are backed up by experimental or corpus data. Thorough formalization of the kind that is known from work in HPSG, LFG, or TAG is not required but is welcome. Work that is backed up by a computer-processable implementation is also eligible to be published in the subseries Implemented Grammars.

Language Science Press

Language Variation

This series will publish book-length studies on language variation including studies in dialectology, sociolinguistics, the diffusion of linguistic variants, contact varieties, and naturally studies incorporating both social and geographical influences on variation. We are interested in variation at every linguistic level from phonetics to discourse, particularly in studies which are based on large and rigorously analyzed datasets. Studies aiming to tap new media as data sources are emphatically welcome. We likewise look forward to studies which emphasize on the one hand the links to other cultural studies such as archaeology, sociology, population genetics and human geography, or on the other hand perspectives from other linguistics sub-disciplines such as historical linguistics, typology, multilingualism, or corpus linguistics.

Language Science Press Monographs on Comparative Niger-Congo

The aim of the series is to enhance comparative-historical studies and linguistic reconstruction of proto-languages of the groups and families within Niger-Congo, and eventually, of Proto-Niger-Congo itself. The monographs in this series may be authored by one person or by a team. They will deal with all aspects of comparative-historical Niger-Congo studies, including both segmental and prosodic phonology, morphology and syntax, etymological dictionaries of groups and families, problems of genetic classification, application of statistical methods to the comparative-historical Niger-Congo studies, correlation of genetic relationships, contact-induced affinities, and so on.

Language Science Press

Studies in Caribbean Languages

This series publishes scholarly monographs and edited volumes on languages of the Caribbean, and Caribbean languages used in diaspora communities worldwide. The use of the term 'Caribbean' here should be taken to mean the Caribbean Basin, and specifically to language varieties spoken along the northern coast of South America, and the Atlantic coast of North and Central America. In keeping with the tradition of the Society we will also consider books on Gullah and AAVE. The series welcomes works in all descriptive and theoretical frameworks regardless of the sub-discipline of linguistics. We are also interested in interdisciplinary works which explore the respective interface between language and areas such as law, mathematics, media, music, psychology, sociology.

Language Science Press

Studies in Diversity Linguistics

This book series publishes book-length studies on individual less-widely studied languages (especially, but not only, reference grammars), as well as works in broadly comparative typological linguistics that takes into account the world-wide diversity of human languages. Work on individual languages and broadly comparative work is of a different nature, but this series sees the two as closely related: Comparative studies need in-depth work on individual languages from around the world to build on, and descriptive work is done best in a comparative perspective.

Language Science Press

Textbooks in Language Sciences

This series aims to publish high-quality textbooks in any area of the language sciences. Since students can least afford expensive books, freely available textbooks are particularly important for the advancement of knowledge. And since there is no reason why textbooks need to be published under the label of an old traditional publisher, we expect that a large number of textbooks will soon be available in open access. Language Science Press is the first publisher of free textbooks. Unlike commercially published textbooks, the books in this series do not have a particular length requirement, so shorter textbooks are also welcome, as are textbooks on more specialized topics that might not be commercially viable.

Language Science Press Topics at the Grammar-Discourse Interface

We publish high-quality monographs and edited collections focusing on the interface between discourse structure, information structure and text structure, in particular discourse structure, rhetorical relations, information structure, anaphora resolution, textual cohesion, ellipsis, salience, etc. We have a focus on using naturally-occurring data (whether from linguistic corpora or from literary texts) wherever possible. The kind of topics we would like to see addressed include (but are not limited to): formalisms for modelling discourse felicity, information structure, anaphora resolution, ellipsis, scope phenomena, sentence connection, perspective in literary text, computational approaches to discourse phenomena.

Language Science Press Translation and Multilingual Natural Language Processing

The book series centres around human and machine translation, with a special emphasis on empirical studies. This includes computational, corpus linguistic and cognitive aspects of translation. By its nature, the topic of translation is interdisciplinary in the sense that it involves many of the classical linguistic sub-disciplines such as computational linguistics, corpus linguistics, morphology, syntax, semantics, pragmatics, text linguistics, lexicography, psycholinguistics, neurolinguistics, applied linguistics and others.

- › tmnlp@langsci-press.org

Possible Topics

- › machine translation (statistical, rule-based, example-based and hybrid), machine aided translation and interpreting translation technology
- › use of corpora in translation
- › annotation, alignment and searchability of translation data
- › cognitive aspects of translation
- › modelling the translation process
- › multi-modal and audiovisual translation

Editorial Board

- › Reinhard Rapp (Chief Editor, Aix-Marseille Université)
- › Silvia Hansen-Schirra (Johannes Gutenberg-Universität Mainz)
- › Oliver Čulo (Johannes Gutenberg-Universität Mainz)
